### **Abstract**

In the period of renewal of the current education system, the necessity of forming environmental culture among students is becoming a demand of the time. In this article, concepts of ecological culture are given, and the factors of its manifestation and development are mentioned.

**Keywords:** ecological culture, legal bases, ecological norms, social relations, ecological activity.

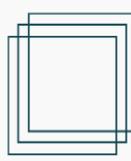

A phenomenon or an understanding of it that is extremely important for the life of a particular nation or state and principles by itself, easily appear and by chance to the world come will not remain [1. 25- p].

From this point of view, any phenomenon, concept or term has its own formation process. the phenomenon of ecological culture is no exception.

This concept expresses the basic idea of our views on forming a modern image of the educational process related to ecological education, developing the ecological worldview of society, free perception of ecological processes, and creating the foundation of ecological education.

The level of ecological culture of a person, his practical activities, feelings, emotional state represent the ecological reality of society and the characteristics of spiritual and cultural development. Based on the relatively priority methodology of distinguishing the phenomenon of culture into material and spiritual spheres in 20th century cultural studies, ecological culture can be divided into "material ecological culture" and "spiritual ecological culture".

Ecological material culture is associated with the basis of production on ecological technologies, which inevitably leads to ecological technological culture. This form of culture, in turn, is not separated from its intellectual foundations. On the contrary, the "materiality" of culture in this area is manifested as an attribute of its spirituality, a form of its materiality. Based on the philosophical essence of the matter, we can imagine the formation of ecological culture and the ecological outlook of a particular person within the framework of the social system of existence.

Therefore, "Culture," writes M. S. Kogon , "is a systematized form of social existence, without understanding the essence of this system, the structural analysis of culture will not be complete." Only by adding the concept of culture to such concepts as "nature", "society", "man" will the analysis be completed. "Nature" - "society" - "man" - "culture" is actually a unique system, and it is a criterion that distinguishes the functions of their main components" [2. 12-p]

It is known that the concept of culture is related to every human behavior. As we know from our practical life, they associate certain areas of human spiritual and practical activity with ecological culture.

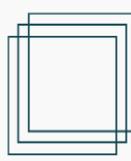

**Ecological culture is** a higher step on the way to further strengthening of ecological education, care and responsibility, progress and well-being.

**Ecological culture is** a noble idea that "Nature is our common home", a concept that is confirmed by practical work. Such as clear skies, clean and clear azure waters, lush green vegetation, forests, flourishing gardens, fertile soil, rich and magnificent animal world, which lies at the heart of cleanliness and purity. with it is that a person sees himself as if he loves and cares for himself.

**Ecological culture** - "Tomorrow is the guarantee of a healthy life for the young generation." We, the current generation, should not only think about ourselves, but also care for the young generation to grow up in a healthy environment. It is worth mentioning what the Prophet, may God bless him and grant him peace, said in the hadiths, "A person cannot be a true Muslim until he shows his love to others ." As long as we want to live in a healthy environment, it is necessary to provide this blessing for the future generations.

**Ecological culture is** manifested in our relationship not only with nature, but also with the "keepers of our cleanliness". It is the extent to which each of us can practice cleanliness in our roads, streets, public places, and in general places where human steps can reach. To what extent do we appreciate the work of the people who keep our cleanliness? we need to know. Because as it is said in the hadiths of the Prophet, peace and blessings of God be upon him, "Whenever you see an evil deed, repel it with your hands, if it is not possible to do so, repel it with your words, and if you are not able to do that, hate it with your heart." ring".

**Ecological culture is** a way of caring for animals and plants from a good point of view. We should appreciate them not only as a source of livelihood and entertainment, but as a blessing created by God Almighty. Because as stated in the hadiths, " Do not aim at a living thing in shooting practice " ,

" If your cruelty to dumb animals could be forgiven, then many of your sins would be forgiven", the meat of wild animals is haram. " [3].

**Ecological culture is in front** of the world community It is to help overcome the difficulties faced by every nation, such as environmental problems, and to be a shoulder to shoulder. While I was writing this part of the article, I recently saw a video circulating on social networks. I saw through social networks that a man of our own Uzbek nationality went to the arid regions of Africa and dug a well to produce water. At the same time, it is difficult to imagine the universal joy of the local population living in that area . Of course, each of us is capable of doing such things, at least where we live.

**Ecological culture** is a changing nature, trees that are increasingly in need of support and protection. Nowadays, people's cutting down of trees in the heart of nature for various purposes is causing pain to nature. And in many cases, we do not remember that this will harm us one day. Owner Amir Temur said: "Where I bought a brick, I replaced it with ten bricks, and when I cut down a tree, I planted ten trees instead." I am not exaggerating when I say that this idea is one of the high standards of ecological culture.

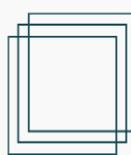

It can also be mentioned that ecological culture is considered a subjective attitude of a person to nature, and this attitude is manifested in realizing the importance of protecting the environment, in believing in the need to approach natural phenomena correctly as a reliable way to eliminate the emerging ecological danger [ 4. p. 48].

Educating an all-round mature person means providing him with consistent mental, ideological-political, moral, labor, aesthetic, physical, ecological, economic and legal education, unity of mind, behavior and activity of students, as well as organization of the educational process. It requires the creation of pedagogical systems that ensure the combination of individual, group and public forms and the implementation of the ideas of this system. Educating an all-round mature person means providing him with consistent mental, ideological-political, moral, labor, aesthetic, physical, ecological, economic and legal education, the unity of consciousness, behavior and activity of learners, as well as education

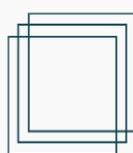

It requires the creation of pedagogical systems that ensure the combination of individual, group and public forms of organization of the process, and adherence to the ideas of this system [5. 3-p].
